

## Seapointe Village Green Roof Restoration Wildwood Crest, New Jersey

Seapointe Village is a seaside resort community located on the south Jersey shore. Constructed in 1986, the 5.5 acre green roof covering the underground parking structure has been plagued by waterproofing and leakage problems which have compromised the structure and causing the need for extensive renovation.

Jeffrey L. Bruce & Co. was selected to restore the landscape and amenity areas of the deck, including complete replacement of all pavement, agronomic, drainage, irrigation, and planter structural systems. Additionally, JBC re-designed all pool, lagoon and waterfall features located on the rooftop including significant artificial rockwork sections, replicating the original design elements. The restoration project included an additional 6" topping slab and water proofing systems to improve the integrity of the structure. The complexity of the construction c required a very precise and complex construction documentation process and close collaboration with the project contractor. The project was completed in May 2005.

- green infrastructure
- campus design
- parks and recreation design
- water resource management
- athletics and sportsfield design
- urban design
- site development
