

Blue Springs High School Stadium

Blue Springs, Missouri

In the Spring of 2005, Jeffrey L. Bruce & Company worked with the Hollis & Miller Group and the Blue Springs Athletics / Administrative team to provide Design and Construction phase services for a new artificial "infill" football stadium field surface at the Blue Springs High School athletic complex. Constructed in conjunction with a stadium renovation initiative including a remodeled press box, new track, fencing, etc. the new stadium field is marked for both varsity football and soccer.

JBC provided design for all related field system improvements including grading, drainage, base construction, irrigation, and field surfacing & marking. During construction, JBC provided on-site observation and verification of the base and turf construction, final punch of the improvements following substantial completions, and conformance testing of infill levels and G-Max levels of the completed system. These improvements were bid in the spring of 2005 and were ready for practice and play in August of 2005.
