

Yankees Parking Garage Rooftop Park

New York City, New York

Jeffrey L. Bruce & Company, LLC was selected as part of a design, build, management team to prepare construction documents for a new city park adjacent to the existing and new Yankees Stadium. The 360,000 square foot roof top park will provide recreational activities such as a regulation synthetic turf soccer field with 8 lane running track, 4 basketball courts, 8 handball courts, restroom facilities, natural turf lawn areas with trees and landscaping for passive recreation and a 500 seat bleachers section for observation of sporting events on the playing field.

JBC's responsibilities included coordination with allied professions during the design phase to ensure each component of the roof top system was addressed. This unique project presented many technical challenges related to drainage systems, irrigation, structural loading and design solutions to address the large expanses of paving and playing surfaces.
