

## Faurot Field Turf Installation University of Missouri-Columbia Columbia, Missouri

Jeffrey L. Bruce & Company was engaged by the University of Missouri - Columbia Campus Facilities Planning, Design and Construction to prepare Design/Build Guidelines for the conversion of the existing Stadium natural turf field to an artificial surface and replacement of the artificial surface in the fieldhouse. JBC prepared guidelines for the conversion which required evaluation of the existing field base construction to determine if the existing base could be used for the new artificial surface. JBC worked closely with the University's Athletic Department to evaluate program use to determine the athletic surface performance requirements best suited

for players and coaches.

Jeffrey L. Bruce & Company prepared and managed the selection process, evaluated the manufacturers' proposals and reviewed the construction for compliance with the performance requirements. Upon completion of the installation of the new artificial turf surface JBC tested the field performance. Construction was completed July 2003.
